RESEARCH PROFILE & KEY ACHIEVEMENTS

I work on party competition and political conflict in Western Europe, combining comparative politics, political behavior, and political sociology with computational text and image analysis. My dissertation develops a supply side account of mainstream party decline under conditions of radical right normalization.

I have published in the *American Political Science Review* and *Party Politics*, with further work forthcoming in *West European Politics* and under review at the *European Journal of Political Research* and *World Politics*. I am co-author of the PartySOME I & II datasets on parties' social media activity, now part of the MEDem network.

Since April 2026 I have been a postdoctoral researcher in the GAEPD project at the University of Innsbruck, where I study parties' appeals to social groups in manifestos and parliamentary speech since the 1970s, and I am extending this into a broader agenda on group appeals as a dimension of party competition.
